MFC Updates

September 26, 2017

MFC Updates - Agenda

• (1) Dispelling the Myth – debentures vs bank loans

- How interest rates are derived
- Matching
- Structure
- Pre-Payments and Early Payout
- MFC vs Bank Example

• (2) Core Best Practices

- What are the MFC "Core" Best Practices (CBP)
- What Municipalities have implemented, or looking at the CBP.

• (3) Debt Affordability Model

- History
- DMA Relationship
- Example
- (4) High Interest Savings Account (HISA)

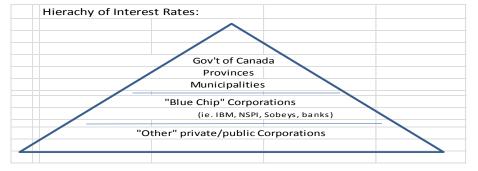

"Debenture vs Long Term Bank Loans for Capital Projects.....Dispelling the Myth"

The MFC Myth

A municipality can borrow more cheaply at the bank than with the MFC.

Fiction – the MFC borrows on the credit of the Province plus a little bit. This means that the cost of issuing debentures through the MFC is the lowest cost of funds available to a

municipality.

Prime rates are a better source of capital financing than the MFC.

Fiction – bank prime rates are floating short term rates, because they are a floating rate they are volatile. The MFC is locked in financing over the life of the project where there is certainty with the cost of funds and the associated principal and interest payments.

Better financing method for setting long-term residential and commercial tax rates.

Local Government Resource Handbook (S3.4, page 12)

Short-term versus long-term interest rates

It is inappropriate to compare short-term rates (prime) with long-term borrowing rates, as they represent different types of financing for different purposes. A short-term rate is a floating rate that is subject to change on a daily basis, whereas a long-term rate is fixed for a specified period. Generally the longer the term, the higher the interest rate because the investor is committing to a longer period of time at a fixed rate. A MFC debenture issue costs reflect a weighted average of borrowing costs for each debenture maturing. For example, a fifteen year MFC serial debenture issue has fifteen interest rates that when averaged, can appear to cost more than the short-term rates (prime) that are quoted by the various Canadian Chartered Banks. However, the 15 year MFC rate is fixed for the life of the loan. The current prime rate will change over the life of the loan and there is increased risk in using this alternative. The rates of a MFC debenture issue carry lower interest rates in the early years (that are comparable to prime), and as the further out in time that the debenture issue goes the bond market adjusts interest rates upward for this time risk factor.

The MFC is inflexible. (Whether on timing, term, interest rates)

Fiction – the MFC can structure long term capital financing over the term that you want 3, 5, 8 or 15 years. It can provide blended payments, serial payments, gross proceeds or net proceeds.

The MFC has a short term borrowing program available to municipalities. It is up to the municipality to do their cash flow projections that best suits their financing needs (not MFC's responsibility). The MFC mirrors the information provided by the municipality when it borrows.

The MFC goes out twice a year, to coincide with construction season.

The MFC does not allow for early repayment of debentures.

Fact – the MFC issues debentures in its own name in order to lend to municipalities. An early repayment by a client would put the MFC "offside" and would result in increased costs for municipalities. The MFC can arrange debentures with a shorter term than the amortization period.

Local Government Resource Handbook (S3.4, page 12)

A participant in a MFC debenture issue is not required to finance over the full life of the debenture. The participant can finance for a shorter time period than the project's amortization period thus taking advantage of the lower interest rates in the debenture issue's earlier years. Traditionally, municipalities have locked in rates for as long a period as possible because they want to know with certainty what their long-term debt service commitments will be. There are arguments on both sides of this debate. It is important when comparing MFC and bank rates that a comparable term is used. Short-term rates quoted by the Canadian Chartered Banks are normally lower but more volatile because the prime interest rate may change several times over the course of the financing period, based upon scheduled announcements by the Bank of Canada. Long-term rates provide certainty with respect to future debt service costs.

Core Best Practices

MFC's Seven Core Best Practices

	Core Best Practice	Inquired/W.I.P./Implemented				
1.	Appropriate Minimum Level of Operating Reserve and Accumulated Surplus	Middleton, Lockeport				
2.	Audit Committees	Middleton, Lockeport, Annapolis Co				
3.	Debt Management Policy	Middleton, Lockeport, East Hants				
4.	Documenting Accounting Policies / Procedures	Middleton, Lockeport, Digby Co				
5.	Financial Forecast, Budget Prep, & Cash Flow Forecasting	Lockeport				
6.	Multi-year Capital Planning	Middleton, Lockeport				
7.	Purchase Policy	Barrington, Lockeport, Digby Co, Middleton				

Debt Affordability Model

Debt Affordability Model (DAM)

The DAM has been in existence for municipal use since the summer of 2004.

Originally, it was designed to assist municipal councils in determining the appropriate level of debt for their municipality. Now the Model can be used for multi-year budgeting, and for forecasting and analyzing revenue and expenditure options.

The Model has been used in the dissolution hearings.

Since inception, 35 municipalities have had presentations/training.

Since 2014, 29 Models have been done.

DMA mandatory requirement if Debt Service Ratio goes over 15%, or 6 Red Municipal Indicators.

Your Thoughts

High Interest Saving Account (HISA)

High Interest Saving Account (HISA)

What is HISA?

It is exactly what the name suggests, just a simple interest bearing savings account that provides a higher rate of interest than a standard bank account.

What's in it for you?

Ability to earn superior interest rates

No term commitments

Ease of administration

No administration fee and no service fees

The greater the total fund balance, the higher the interest rate

Now lets look at the HISA presentation for more details.
